

SQL ASSIGNMENT ONE

Name: Anurag Arun patil

1. What is SQL?

SQL stands for structured query language. It is used for storing, manipulating, presenting the relational database that will be used for further decision making process.

2. What is difference between Data and Information?

Data = Data refers to raw, unorganized facts that are collected from various sources.

These facts could be numbers, characters, symbols, or even multimedia like images and videos. Data on its own has no meaning until it is processed and interpreted.

Information = It refers to organized and contextualized data. Insight or decision derived from information. These are the data stored in the form of tables or texts.

3. What is Database and DBMS?

Database = It is an organized collection of data that can be accessed electronically.

DBMS = It is a software system that is used to store, manipulate, delete, present the data in database.

Example: MySQL

4. What is Relational Database Management System?

A Relational Database Management System(RDBMS) stores data in a tabular form and enforces relationships between them using keys.

5. State at least 5 names of Database Management System or Software.

-MySQL

-Oracle Database

-Microsoft SQL server

-PostgreSQL
